

## REMARKS

The application has been amended to provide drawings illustrating all of the limitations of the pending claims of the application, to amend the specification accordingly to refer to and describe the drawings of the application, and to place the application as a whole into *prima facie* condition for allowance at this time. Care has been taken to avoid the introduction of any new subject matter into the application as a result of the foregoing amendments.

Applicant again acknowledges with appreciation, the Examiner's indication that all of the claims of the application now appear to be allowable, subject to the amendments to the specification and drawings herein.

During the aforementioned telephonic conference of May 26, 2006, the Examiner directed that a new drawing or drawings, expressly illustrating the feature, recited in claims 13, and 26 - 28, namely "a first of the at least three longitudinally extending closure lines [being] disposed between a second and third of the at least three longitudinally extending closure lines, with the first closure line being disposed substantially closer to one of the second and third closure lines than to the other of the second and third closure lines to create at least one inner chamber having a width substantially less than at least one other inner chamber" be shown. The Examiner has acknowledged that this structure is already inherently disclosed in the original disclosure of the application, as part of the embodiment of Figs. 1 - 8 therein, so that there is antecedent basis in the application for the amendments to the drawings and specification being made herein. The Examiner has further directed that the specification be amended as necessary to provide direct reference to the new drawing(s).

In complete response hereto, Applicant has amended the drawings by adding new figures 23 and 24, which illustrate the invention in the embodiment having the specific structural feature recited above, and has further accordingly amended the specification in the Brief and Detailed Descriptions of the drawings. Applicant respectfully submits that complete support for the foregoing amendments is provided in the specification as originally filed (as indicated in the amendment language itself), and

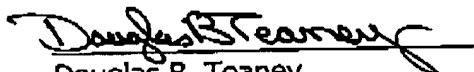

accordingly, entry, consideration and acceptance of the foregoing amendments to the drawings and specification are respectfully solicited. Therefore, Applicant respectfully submits that the application now contains drawings and description for all of the limitations of the claims presently pending in the application. In view of the Examiner's indication of allowability mentioned above, Applicant respectfully submits that the application is now in *prima facie* condition for allowance at this time.

Applicant submits that the application as a whole, including all of claims 6 - 8, 11 - 13, 19 - 22, 24, and 25 - 28, are in *prima facie* condition for allowance, and reconsideration and allowance of the application as a whole are respectfully solicited.

Should anything further be required, a telephone call to the undersigned, at (312) 456-8400, is respectfully invited.

Respectfully submitted,  
GREENBERG TRAURIG, LLP
